ELECTRONIC SIZER OF INTELLIGENT CHAIN MODEL "CAR-EKO"

Tecnofruta Levante, has a new range of latest generation electronic Sizers, called CAR-EKO, a small sorter, economical and efficient, with the possibility to calibrate by weight, color and diameter.

The machine has all modes of transport cups, depending the size of product to work. The range goes from cups for small fruit P.76, P.114, P.228 to P.152 up to larger products such as melon.

This Sizer is designed for small producers, who for space and economy can not have standard machines, thus calibrating with EKO, anyone can now have the technology today for their own benefit. Cutting edge technology available to all.

Ideal machine to work with khakis, peaches, nectarines, oranges with bouquet, etc., fragile products that require a more delicate treatment in the manufacturing process.

Low maintenance cost due to the simplicity and functionality of the mechanical system.

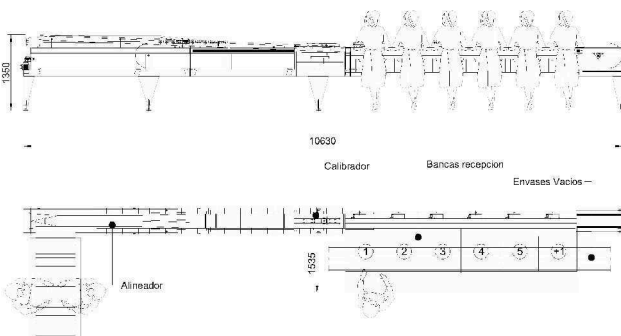

Pressure weight: + / - 1 gram.

Production up to 28 500 fruits per hour, depending on the filling of the product to work with.

Selection by weight, color and diameter.

Dedicated to small and medium producers who do not want to give up the precision, reliability and sensitivity of the Electronic Sizers of higher capacity. Ideal for processing of many products due to its versatility for different types of fruit can be processed.

CALIBRADOR ELECTRONICO DE CADENA INTELIGENTE MODELO "CAROLINO"

-Production: 28,000 fruits per hour, with a filling of an 80/90%.

-Lanes: Mono-Lane , the new Sizer is available in the version of a lane, to satisfy, as best as possible, the requirements of each horticultural production plant.

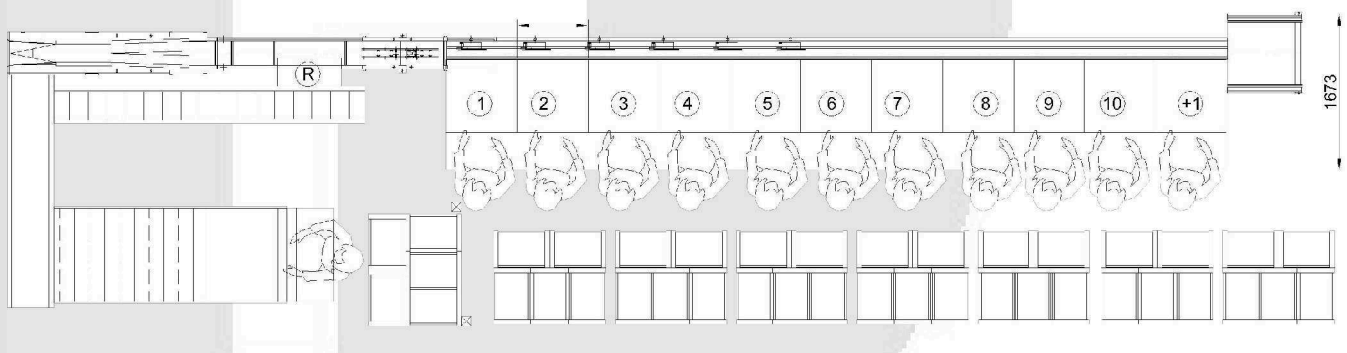

There are many technological innovations in these new generation Sizers that capitalize the Tecnofruta experience of over 10 years in the international market.

--Types of fruit: CAR-EKO is an electronic Sizer with versatile lanes, able to process more than 15 types of fruits and also 50 different varieties of medium-small format: apricots, plums, peaches, nectarines, kiwi, pears, persimmon, oranges, tangerines, apples, lemons, tomatoes, figs and other fruits of elongated shape as zucchini, cucumbers and artichokes.

--Outputs: The Standard machine has 5 +1 exits on benches 686 mm. wide (expandable in both outputs as in width banking)..

--Filling capacity: The technology allows to high productivity, thanks to the coefficient of filling of the lanes, with values ranging between 80% and 90%..

Example of a Sizer EKO extended to 10 +1 outputs.
